

## Practice Problem on Abstract Class

Object-oriented programming in Java

---

Implements the following classes:

From main method, implement the following tasks:

- Create a new **ClothingItem** object p1 with reference type **ClothingItem**.
- Create a new **ElectronicDeice** object p2 with reference type **ElectronicDevice**.
- Add 10% tax with p2 and 20% discount with p1.
- Now, create an **ArrayList** of type **Product** and add p1, p2 in that ArrayList.
- Invoke **toString()** method for all elements in ArrayList.
